

RoofGard

A long-lasting coloured coating that protects and restores concrete roof tiles.

Andura

Why choose RoofGard?

Andura RoofGard protects and enhances the surface of concrete roof tiles, giving them the colour and appearance of a new roof.

Roof tiles are continuously attacked by the elements and become porous with age and as a result creates the ideal conditions to promote the growth of moss and lichens. The unwanted growth, over a period of time, results in a shabby appearance, potentially decreasing the value of your home.

RoofGard gives your concrete tiles the colour and appearance of a new roof along with excellent protection against weathering. It is important to treat concrete tiles because they become less resistant to weather, mould and lichen growth over time. Choose from our selection of 7 colours and give your roof a new look.

In independent tests carried out by the Paint Research Association (PRA), RoofGard was shown to be exceptionally durable, performing well with good colour stability, for more than 10 years, thereby extending the life of your roof. PRA concludes that the RoofGard performed very well with very little change in surface appearance and no discernible detrimental effect.

After

Before

High performance benefits

Highly Durable

Alkali Resistant

Colour Fast

Resistant to Moss and Lichen Growth

Weatherproof and Breathable

Acid Rain and Pollution Resistant

RoofGard in action...

(Examples of the main processes, some of which may not apply to all installations.)

STAGE
01

Inspection

Before the RoofGard coating is applied, the contractor is required to inspect the roof in question and then perform all the necessary preparation work in accordance with Andura recommendations.

STAGE
02

Restoration

This may include: repairs, replacement of damaged tiles, removal of moss & lichen and general cleaning down.

STAGE
03

Biocide Treatment

It is recommended surfaces are treated with Andura Biocide to protect from future growth of moss and lichens.

STAGE
04

Application

Application of RoofGard can then be carried out with a two coat process, in order to provide the tiles with full protection from weathering, giving you the appearance of a new roof.
