

Block Seal

Anti algae and weed growth resistant properties that will ensure a beautifully protected patio for the future.

Andura

Why choose Block Seal?

Advanced sealant technology that maintains and preserves your driveway for years to come.

Andura's Block Seal enhances and protects your driveway or patio in several outstanding ways ensuring your investment stays as beautiful as when it was first laid. Block Seal has a technical formula that prevents weathering, surface cracking, weed and algae growth.

Its binding technology stabilises the jointing sand and prevents cracking whilst creating a smooth uniformed appearance to your block paving. An easy to apply formula makes Block Seal 3 step process a time efficient way to improve the appearance of your outside area.

Protects From

Moss Growth

Increases durability
of paving slabs

Enhances colour

Reduces the
process of colour
fading on block
pavements

Block Sealer in action

(Examples of the main processes, some of which may not apply to all installations.)

STAGE
01

Preparation

All dirt, mould, algae and general grime must be removed by power-washing, wire brushing, scraping or other mechanical methods. Where appropriate, surfaces are treated with Andura Biocide. This is strongly recommended in areas where organic growth has been removed.

STAGE
02

Re-grout

Prepared paving should be re-grouted with sand complying with BS6717 or BS6677. Remove sand remaining on the surface before applying Block Sealer.

STAGE
03

Application

Andura's Block Sealer is applied with roller or brush to create a uniform and attractive finish to your patio or paving slabs. A quick solution and investment into the longevity of your outside area.
