

The Andura CLASSIC 21 System

(Examples of the main processes, some of which may not apply to all installations)

MASKING-UP

The very first process is the protection of all doors, windows, paths and surrounding areas by masking-up with tape, heavy-duty paper, polythene and dust-sheets. Great care is taken to protect plants, bushes and lawns.

PREPARATION

Removal of all dirt, mould, algae and loose paint by power-washing, wire-brushing, scraping or other mechanical method. Where appropriate, treat surfaces with Andura Biocide. This is strongly recommended in areas where growth has been removed.

RESTORATION AND REPAIR WORK

The next stage is to repair all damaged and worn surfaces, reinstating with the appropriate materials. Damaged render is removed and all cracks hacked out. Great care is taken towards minimising the visibility of the repair. Previous unpainted brickwork can be bag-rubbed with an SBR mortar mix to disguise imperfections whilst retaining the natural brick appearance.

PRIMER OR SLUSHCOAT

CLASSIC Primer or Slush are high performance base coats designed to be used on masonry surfaces, applied prior to the final application of CLASSIC 21. This provides excellent adhesion and weather-proofing.

APPLICATION

Applied by using Specialist Spray Equipment, Andura CLASSIC 21 is sprayed onto the surfaces. A minimum of 1.2 litres of Andura CLASSIC 21 is applied to every square metre. The Andura CLASSIC 21 textured finish helps conceal any repair work and dries to a beautiful uniform finish.

High Performance.

WILL NOT CHIP, FLAKE OR PEEL

Ordinary paints soon become brittle and this quite often results in chipping, flaking and peeling. Andura CLASSIC 21, when applied to correctly prepared surfaces in accordance with Andura's recommendations, remains flexible and will not chip, flake or peel.

LONG LASTING

Andura CLASSIC 21 is a high performance coating that eliminates the need for frequent repainting and maintenance of exterior walls.

MOULD RESISTANT

Ordinary paints quickly lose their resistance to mould and algae. Andura CLASSIC 21 contains fungicides resulting in superb mould and algae resistance.

ALKALI RESISTANT

All cementitious surfaces contain alkali and this can soon break down conventional paint. The Andura CLASSIC 21 System has outstanding resistance to alkali.

RESISTS ACID RAIN, CHEMICAL ATTACK AND POLLUTION

CLASSIC 21 has excellent resistance to acid rain and resists the penetration of carbon dioxide which can cause carbonation, a process which damages reinforced concrete.

WEATHERPROOF AND MICROPOROUS

Andura CLASSIC 21 stops water penetrating through the substrate. Water vapour inside external walls can pass out through the Andura CLASSIC 21 coating thus allowing the walls to breathe reducing problems traditionally associated with water — such as cracking, spalling and delamination.

Andura CLASSIC 21 is an exterior textured masonry coating system. A range of beautiful architectural colours is available — each with a textured finish carefully designed for maximum obliteration of surface defects.

COLOUR STABILITY

Ordinary paints soon fade, discolour and become badly stained. Light-fast pigments of the highest quality are used in Andura CLASSIC 21 ensuring good colour stability on exposure to sunlight. Andura CLASSIC 21 texture level is carefully controlled to avoid excessive dirt retention. An occasional wash down with a garden hose is recommended.

SPECIALIST APPLICATION

To enable the Andura CLASSIC 21 System to be applied in accordance with the manufacturer's guidelines, Andura Coatings have available comprehensive technical support for their appointed dealers.

CLASSIC 21

Protecting your home against the British weather

Andura CLASSIC 21

Protects and transforms the appearance of your home

Across town and country, thousands of properties are beautifully weatherproofed against the damaging effects of sun, acid rain, frost and snow.

Andura CLASSIC 21 is a Textured Masonry treatment that protects and beautifies the external walls of your home. Applied by specialists the installation eliminates the need for frequent re-painting.

- CLASSIC 21 is many times thicker than conventional paint and its unique textured finish helps conceal surface imperfections, repair or restoration work to ensure uniform results of lasting beauty.
- The system resists rain penetration whilst still allowing the walls of the home to breathe, reducing problems traditionally associated with water such as cracking, spalling and delamination.
- CLASSIC 21 is manufactured in 12 beautiful architectural colours.

Before
